

## SUBJECT CURRICULUM OUTLINE

Term	Topic/Unit of work	Knowledge	Skills	Assessment
Autumn Term 1	3.1.1 Biological Molecules (32)	3.1.1 Monomers and polymers 3.1.2 Carbohydrates 3.1.3 Lipids 3.1.4. Proteins 3.1.4.1 General properties of proteins 3.1.4.2 Many proteins are enzymes	<p><b>AT f</b> Students could use, and interpret the results of, qualitative tests for reducing sugars, non-reducing sugars and starch. Students could use, and interpret the results of, the emulsion test for lipids.</p> <p><b>AT g</b> Students could use chromatography, with known standard solutions, to separate a mixture of monosaccharides and identify their components. <b>AT c</b> Students could produce a dilution series of glucose solution and use colorimetric techniques to produce a calibration curve with which to identify the concentration of glucose in an unknown solution.</p> <p><b>AT f</b> Students could use, and interpret the results of, a biuret test for proteins.</p> <p><b>AT g</b> Students could use chromatography with known standard solutions, to separate a mixture of amino acids and identify their components.</p> <p><b>MS 0.5</b> Students could be given the hydrogen ion concentration of a solution in order to calculate its pH, using the formula: <math>\text{pH} = -\log_{10} \text{H}^+</math></p> <p><b>PS 2.4</b> Students could identify the variables that must be controlled in their investigation into rate of reaction.</p> <p><b>PS 3.3</b> Students could calculate the uncertainty of their measurements of the rate of reaction.</p> <p><b>MS 3.2</b> Students could select an appropriate format for the graphical presentation of the results of their investigation into the rate of enzyme controlled reactions.</p> <p><b>MS 3.6</b> Students could use a tangent to find the initial rate of an enzyme-controlled reaction</p>	Induction Test RAG Check STAMPS every 2 weeks

## SUBJECT CURRICULUM OUTLINE

	<p><b>3.2.1</b> Cell Structure (10)</p> <p><b>3.2.2</b> Cells arise from other cells (8)</p>	<p>3.2.1 Cell structure The cell theory is a unifying concept in biology.</p> <p>3.2.1.1 Structure of eukaryotic cells</p> <p>3.2.1.2 Structure of prokaryotic cells and of viruses#</p> <p>3.2.1.3 Methods of studying cells</p> <p>3.2.2 All cells arise from other cells</p>	<p><b>Practical:</b> Biochemical test procedures for identifying Reducing and Non-reducing sugar, lipids and protein</p> <p><b>AT d, e and f</b> Students could use iodine in potassium iodide solution to identify starch grains in plant cells.</p> <p><b>MS 1.8</b></p> <p><b>Practical:</b> Use chromatography with known standard solutions, to separate a mixture of amino acids and identify their components</p> <p><b>AT d and e</b></p> <p><b>MS 0.3</b> Calculation of a mitotic index.</p> <p><b>MS 1.8</b></p>	
Autumn Term 2	<p><b>3.1.1</b> Biological Molecules (32)</p> <p><b>3.2.2</b> Cells arise from other cells (8)</p> <p><b>3.2.4</b> Cell Recognition (11)</p>	<p>3.1.5 Nucleic acids are important information-carrying molecules</p> <p>3.1.5.1 Structure of DNA and RNA</p> <p>3.1.5.2 DNA replication</p> <p>3.1.6 ATP</p> <p>3.1.7 Water</p> <p>3.1.8 Inorganic ions</p> <p>3.2.2 All cells arise from other cells</p> <p>3.2.4 Cell recognition and the immune system</p>	<p><b>MS 0.3</b> Students could use incomplete information about the frequency of bases on DNA strands to find the frequency of other bases.</p> <p><b>Required practical 1</b> – Investigation into the effect of a named variable on the rate of an enzyme-controlled reaction.</p> <p><b>Required practical 2:</b> - Preparation of stained squashes of cells from plant root tips; set-up and use of an optical microscope to identify the stages of mitosis in these stained squashes and calculation of a mitotic index.</p>	STAMPS every 2 weeks
Spring Term 1	<p><b>3.2.3</b> Transport across membranes (15)</p>	<p>3.2.3 Transport across cell membranes</p>	<p><b>MS 3.2</b> Students could plot the data from their investigations in an appropriate format.</p> <p><b>MS 3.4</b> Students could determine the water potential of plant tissues using the intercept of a</p>	STAMPS every 2 weeks

## SUBJECT CURRICULUM OUTLINE

	<p><b>3.3</b> Organisms exchange substances with their environment (13)</p> <p><b>3.2.4</b> Cell Recognition (11)</p>	<p>3.3.1 Surface area to volume ratio</p> <p>3.2.4 Cell recognition and the immune system</p>	<p>graph of, eg, water potential of solution against gain/loss of mass.</p> <p><b>Required practical 4:</b></p> <p>Investigation into the effect of a named variable on the permeability of cell-surface membranes.</p> <p><b>Required practical 3:</b></p> <p>Production of a dilution series of a solute to produce a calibration curve with which to identify the water potential of plant tissue.</p>	<p>MOCK Exams</p>
<p>Spring Term 2</p>	<p><b>3.3</b> Organisms exchange substances with their environment (13)</p>	<p>3.3.2 Gas exchange</p>	<p><b>PS 1.1</b> Students could use agar blocks containing indicator to determine the effect of surface area to volume ratio and concentration gradient on the diffusion of an acid or alkali.</p> <p><b>MS 4.1</b> Students could be given the dimensions of cells with different shapes from which to calculate the surface area to volume ratios of these cells</p> <p><b>AT j</b> Students could dissect mammalian lungs, the gas exchange system of a bony fish or of an insect.</p> <p><b>AT d</b> Students could use an optical microscope to:</p> <ul style="list-style-type: none"> <li>• examine prepared mounts of gas exchange surfaces of a mammal, fish and insect, or temporary mounts of gills</li> <li>• examine vertical sections through a dicotyledonous leaf.</li> </ul> <p><b>AT b</b> Students could use threeway taps, manometers and simple respirometers to measure volumes of air involved in gas exchange.</p>	<p>STAMPS every 2 weeks</p>

## SUBJECT CURRICULUM OUTLINE

	<p><b>3.3.3</b> Digestion (6)</p> <p><b>3.4</b> Genetic Info (28)</p>	<p>3.3.3 Digestion and absorption Digestion in mammals Mechanisms of absorption</p>	<p><b>MS 2.2</b> Students could be given values of pulmonary ventilation rate (PVR) and one other measure, requiring them to change the subject of the equation: <math>PV R = \text{tidal volume} \times \text{breathing rate}</math></p> <p><b>PS 1.1</b> Students could: • design and carry out investigations into the effect of a pH or bile salts on the rate of reaction catalysed by a digestive enzyme • use Visking tubing models to investigate the absorption of the products of digestion.</p>	
<p>Summer Term 1</p>	<p><b>3.3.4</b> Mass Transport in animals(14)</p> <p><b>3.4</b> Genetic Info (28)</p>	<p>3.3.4.1 Mass transport in animals Haemoglobin Blood Circulation Gross Structure of the heart</p> <p>3.4.1 DNA, genes and chromosomes</p>	<p><b>AT h</b> Students could design and carry out an investigation into the effect of a named variable on human pulse rate or on the heart rate of an invertebrate, such as Daphnia.</p> <p><b>MS 2.2</b> Students could be given values of cardiac output (CO) and one other measure, requiring them to change the subject of the equation: <math>CO = \text{stroke volume} \times \text{heart rate}</math></p> <p><b>Required practical 5:</b> Dissection of animal respiratory system (fish gills) or mass transport (heart dissection)</p> <p><b>AT j</b></p>	<p>STAMPS every 2 weeks</p> <p>MOCK Exam Week</p>

## SUBJECT CURRICULUM OUTLINE

		<p>3.4.2 DNA and protein synthesis          3.4.3 Genetic diversity can arise as a result of mutation or during meiosis          3.4.4 Genetic diversity and adaptation          3.4.5 Species and taxonomy          3.4.6 Biodiversity within a community          3.4.7 Investigating diversity</p>	<p><b>AT d</b> Students could examine meiosis in prepared slides of suitable plant or animal tissue.</p> <p><b>MS 0.5</b> Students could: • use the expression <math>2n</math> to calculate the possible number of different combinations of chromosomes following meiosis, without crossing over • derive a formula from this to calculate the possible number of different combinations of chromosomes following random fertilisation of two gametes, where <math>n</math> is the number of homologous chromosomes pairs</p> <p><b>MS 2.5</b> Students could use a logarithmic scale when dealing with data relating to large numbers of bacteria in a culture.</p> <p><b>AT i</b></p> <p><b>MS 2.3</b> Students could be given data from which to calculate an index of diversity and interpret the significance of the calculated value of the index.</p> <p><b>AT k</b> Students could: • design appropriate methods to ensure random sampling • carry out random sampling within a single population • use random samples to investigate the effect of position on the growth of leaves.</p> <p><b>MS 1.2</b> Students could use standard scientific calculators to calculate the mean values of data they have collected or have been given.</p> <p><b>MS 1.10</b> Students could calculate, and interpret the values of, the standard deviations of their mean values.</p> <p><b>Required practical 6:</b></p>	
--	--	---	--	--

## SUBJECT CURRICULUM OUTLINE

			Use of aseptic techniques to investigate the effect of anti-microbial substances on microbial growth	
Summer Term 2	3.3.4 Mass Transport in plants(14)	3.3.4.2 Mass transport in plants The cohesion-tension theory of water transport in the xylem The mass flow hypothesis for the mechanism of translocation	<p><b>AT b</b> Students could set up and use a potometer to investigate the effect of a named environmental variable on the rate of transpiration.</p> <p><b>Required practical 12:</b> Investigation into the effect of a named environmental factor on the distribution of a given species.</p> <p><b>Practical:</b> Research, reference and present individual posters.</p>	STAMPS every 2 weeks
